

MPS-Managed Print Services

A Service Contract and BEYOND! All Inclusive Program Covers Your Printers!

Reduced Costs

Reduce costs by identifying your total cost of ownership

Optimized Efficiency

Realize the benefits of automated processes.

Increased Security

Security solutions safeguard the privacy and confidentiality.

Improve Sustainability

See your true environmental impact of your business.

Managed Print Services Benefits

- FREE Installation and 30 day monitoring
- Automatic toner fulfillment
- We deliver all of your consumable needs
- No need to order supplies or store inventory
- Eliminates ordering errors
- Reduces your administrative expenses
- Saves you personnel time
- Simple invoicing
- Set auto service alerts
- Eliminates burden of technical services issues
- ProTech* certified technicians support
- We monitor and assess your printer fleet 24/7
- Service call cost included
- Proactive maintenance

Printer Fleet Monitoring

Our Fleet Monitoring Service Includes:

- Identifying how many devices you own and whether each is performing optimally
- Tracking how much volume is being generated per device, by department and by user
- Determining how much you're spending per device and its cost-per-print (CPP)
- Monitoring print jobs to allocate costs and identify new ways to improve output—including digitization and automating your print workflow
- Auto toner delivery
- Advance account management
- Periodic account reviews focusing on improving workflow and further reducing costs

Ask for a **FREE** 30 day assessment & proposal!

*The Pro-Tech Service Award recognizes those Konica Minolta dealers who have demonstrated an exceptional commitment to customer support and satisfaction.

Managed Print Services Q&A

Focus on your business and let us manage your printing and scanning infrastructure

What are managed print services (MPS)?

A managed print service (MPS), like Optimized Print Services (OPS) from Konica Minolta, allows you to offload the maintenance and management of your printing and scanning infrastructure to a third-party provider. The provider may take over management of your existing devices (even a mixed fleet) or may partially or completely replace your devices.

What does a managed print service do?

Your MPS should include features like:

- Continuous optimization of your printing and scanning infrastructure to ensure it keeps pace with business needs
- Print management software for user authentication, usage monitoring, cost management and more
- Remote support for proactive device monitoring and remote fixing of issues wherever possible

What devices can be included in a managed print service?

Your MPS provider should offer a range of devices to suit the needs of your organization and your users. At Konica Minolta, for example, we offer a range of devices that:

- Can print, scan, copy and even fax
- Produce black and white or color output on a wide range of paper sizes
- Enable duplex (double-sided) printing
- Provide finishing options like stapling and booklet-making
- Are safe and easy for anyone to use
- Offer enhanced security features to safeguard your data
- Are designed for a reduced environmental impact

Our Fleet Monitoring Service Includes:

- Identifying how many devices you own and whether each is performing optimally
- Tracking how much volume is being generated per device, by department and by user
- Determining how much you're spending per device and its cost-per-print (CPP)
- Monitoring print jobs to allocate costs and identify new ways to improve output—including digitization and automating your print workflow

Our Advanced Services With These Added Benefits:

- Auto toner delivery
- Advance account management
- Periodic account reviews focusing on improving workflow and further reducing costs
